The word 'phonetics' as written in IPA

★ #1

A phonological disorder is an impaired comprehension of the sound system of a language, and the rules that govern the sound combinations.

★ #2

For 80% of children with phonological disorders, the disorders are sufficiently severe to require clinical treatment.

★ #3

There is an observed relationship between early phonological disorders and subsequent reading, writing, spelling, and mathematical abilities.

★ #4

Children with phonological disorders often require other types of remedial services, with 50% to 70% exhibiting general academic difficulty through grade 12.
