About  
Voice

#1

Voice disorders are characterized by the abnormal production and/or absence of vocal quality, pitch, loudness, resonance, and/or duration, given an individual's age and/or sex.

#2

Vocal disturbances in children are surprisingly common. A child who presents with hoarseness demands a rapid and thorough assessment. The occurrence of hoarseness ranges from 6% to 23% in school-aged children.

#3

Voice disorders in children may impede their academic performance and their socialization in school. Moreover, the majority of adult voice disorders are thought to begin during childhood.

#4

Early identification of pediatric disfluency and voice disorders is advisable because these disorders may progress to lifelong communicative impairments if left untreated.
